

JOSE EMMANUEL E. DIOSO

B.S. COMPUTER SCIENCE GRADUATE

Naic, Cavite 4110 ♦ 09358433230 ♦ joemdioso@gmail.com ♦ <https://github.com/joemzkie>

PROFESSIONAL SUMMARY

Action-oriented Computer Science graduate and thesis lead with a strong foundation in high-performance backend architecture (C++, Python). Excels at rapidly translating complex data problems into scalable solutions. Seeking an entry-level role to drive efficiency and engineering excellence.

SKILLS

Programming Languages: C++ (Modern C++17/20), Python, C#, Java.	Libraries & Frameworks: Scikit-learn, XGBoost, Polars, pybind11.
Tools & Technologies: VS Code, Git/GitHub, Jupyter Notebooks, PostgreSQL, MySQL	Object-Oriented Programming
Machine Learning	

PROJECTS

Cloud-Native Asset Tracking Platform | *React, typescript, fastapi postgresql-*
[https://github.com/joemzkie/Asset_Tracker]

- Architected a RESTful backend utilizing Python and FastAPI, deployed on Render, to ingest and serve real-time market data via yfinance.
- Engineered a secure PostgreSQL database layer using Supabase, implementing Row Level Security (RLS) and custom SQL triggers for automated profile generation.
- Developed a reactive, type-safe frontend dashboard deployed on Vercel, featuring dynamic state management to instantly calculate and render live portfolio valuations.

NLP Resume Screening System | *Python, SBERT, XGBoost*

- Directed a student research team to build an automated evaluation pipeline, successfully processing and cleaning a dataset of over 5,000 raw resumes.
- Implemented Natural Language Processing techniques, utilizing TF-IDF and SBERT for robust feature extraction and semantic text analysis.
- Trained and evaluated an XGBoost classification model to categorize and rank candidate profiles, optimizing the F1-score for high-accuracy screening.

Shelf Control Inventory System | *C++* — [github.com/joemzkie/Shelf-control]

- Developed a local tracking and inventory management system utilizing core Object-Oriented C++ paradigms.
- Engineered persistent data storage using the standard `<fstream>` library for efficient file I/O operations, eliminating external database overhead.

EXPERIENCE

Computer Science Intern, 06/2025 - 08/2025

Department of Computer Studies CVSU-CCAT

- Mentored and provided technical support to students during hands-on PHP programming coursework.
- Configured and deployed PC workstations in newly established laboratories for the upcoming academic semester.

EDUCATION

Bachelor of Computer Science: 06/2026

Cavite State University CCAT-Campus

- **Relevant Coursework**: Object-Oriented Programming, Data Structures & Algorithms, Machine Learning.
